Note :

- All colors herein are Lumiflon™ -based fluorocarbon coatings produced in our continuous coil coating line.
- Minimum quantity required for the colors herein is 500m² per order per standard width. Standard width (1270mm, 1575mm) vary depend on colors.
- Color samples or color chart may slightly differ from actual product.
- Please consult our office for further information.

Color variation :

- ALPOLIC™ Premium Aluminum Series features a transparent coating that highlights the metallic luster of the aluminum surface. This series offers a distinctive appearance similar to an anodized finish or a natural metal look, which cannot be achieved with standard color coatings.
- On the other hand, due to its unique coating composition, it is greater than conventional coating products in terms of a natural color variation between adjacent panels or parts on a single panel. This is achieved due to the natural brightness and shading of the metal, which is also influenced by slight natural variations within the raw materials utilized.
- All aluminum skins have slight differences during the manufacturing process, resulting in slight color differences.
- To ensure color consistency, we recommend placing total requirement in one order or allotting the panels with adequate grouping arrangement.
- The product shows optical difference between directions, as metallic-paint colors do. Therefore, it is important to arrange panels in the same direction to avoid the optical (color) difference.
